

# DATA MODUL expands embedded partner network: Cooperation with FORLINX Embedded

Munich, May 07, 2025

The full-service provider DATA MODUL is further expanding its embedded portfolio and will be working with the company FORLINX Embedded in future. The aim of the partnership is to provide high-performance ARM-based system solutions for industrial applications.

FORLINX Embedded is a developer and manufacturer of System-on-Modules (SoMs) and Single Board Computers (SBCs) based on modern ARM processor architectures. The company co-operates with established SoC manufacturers such as NXP, Texas Instruments, Rockchip and Allwinner. With a wide range of long-term available and robust embedded platforms that can be operated under Linux and Android, FORLINX ideally complements DATA MODUL's existing product portfolio - especially in the area of Rockchip- and TI-based systems.

'With FORLINX Embedded, we have gained a partner that not only has a comprehensive product portfolio, but also in-depth expertise in the ARM sector. Together we are creating embedded solutions that are characterised by high performance, energy efficiency and an attractive price-performance ratio - optimally tailored to the requirements of our customers,' says Michael Klett, Head of Products & Markets – Electronics & Peripherals at DATA MODUL.

By combining the embedded platforms from FORLINX with the modular display and touch portfolio from DATA MODUL, customised complete solutions are created for a wide range of industrial applications.
